DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, 16-24, 26-37, and 41-49, drawn to a method of designing a nucleic acid probe array using clustering, classified in class 702, subclass 20.
- II. Claims 13-15, 25, 38-40, and 50, drawn to a method of designing a nucleic acid probe array using trimming, classified in class 702, subclass 20.

The inventions are distinct, each from the other because of the following reasons:

The method of Group I can be shown to be distinct from the method of Group II because the steps performed differ significantly to result in the design of nucleic acid probe arrays and because each method does not require the other.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, particularly with respect to non-patent literature, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1631

application. Any amendment of inventorship must be accompanied by a request under 37 CFR

1.48(b) and by the fee required under 37 CFR 1.17(i).
